Title	VP, Technology Transformation
Segment	Sub-lanes, in order of depth: operating model and product model transformation · platform engineering and platform-as-a-product transformation · AI-native delivery transformation.
Sector	Financial services: Schedule I banks, payments infrastructure and networks, scale-stage fintech. Adjacent and acceptable: identity, regtech, and digital trust infrastructure.

THE RECORD, IN EIGHT LINES

- Twenty-plus years in Canadian financial services technology, the last decade as the accountable executive on enterprise-scale change at TD, CIBC, and Interac.
- Led a Platform-as-Product organization at Interac (operator of the payment rails Canadians use more than 20 million times a day) through a full transition from project delivery to a product operating model.
- Built Interac's first formal enterprise architecture practice: standards, review forums, decision rights, and strategy.
- Set enterprise API strategy and governance at TD through the API-native wave. Bank-wide standards, and an external developer platform prototyped years ahead of Canada's open banking mandate.
- Senior Director, Retail Banking and Shared Services Architecture at CIBC, during a core API-native modernization push. Orchestrated a turnaround for a program stuck in stasis on arrival, by clarifying platform boundaries and decision rights and holding each owner accountable for unblocking their own decisions.
- Specialist in the socio-technical layer: decision rights, team topology, delivery cadence, and governance. These are the structures that decide whether a funded transformation converts into outcomes, and they are often neglected.
- Current work is AI-native operating model design. At Interac I held platform delivery commitments under a flat-headcount expectation by budgeting AI agent capacity into squad gaps rather than asking for headcount.
- Founder and Principal, OpMo Advisory Inc. Incorporated and insured. Comfortable either as an interim line leader or embedded alongside a permanent hire, including training the person who inherits the model.

STRUCTURE AND AVAILABILITY

Engagement shapes

Fractional seats at 1, 2, or 2.5 days per week, priced as a monthly retainer for a defined seat; or day-rate work for interim mandates. The 2.5-day transformation-lead shape includes successor training.

Rates and terms

Current day rate by engagement shape, minimums, and expenses are published and kept current at opmoadvisory.com/firms/rates. The basis is public: the PSPC / TBIPS market rate card plus a regulated-industry premium.

Availability

Within two weeks. Preference is 2 to 2.5 days per week alongside the practice. Open to full-time interim on a time-boxed basis, three to six months.

Contracting

Through OpMo Advisory Inc., incorporated and insured. Certificates at contracting. Remote-first with an on-site cadence to suit.

Represent me as a senior operator who builds the operating model and trains the leader who inherits it, not as staff augmentation. Check with me before presenting to a client; I will turn a yes or no around same day.
