

GREG KLIEWER

An architect who has also run the platform organizations that architecture serves.

Toronto, Ontario · greg@opmoadvisory.com · +1 (416) 434-8362 · linkedin.com/in/gregkliewer · opmoadvisory.com

Twenty-plus years in Canadian financial services technology, most of it as the architect or the accountable executive at banks and payments providers: TD, CIBC, and Interac. I have built and run architecture practices. I have also run the platform and engineering organizations those practices serve.

That second part changed how I work. I embed standards at the platform level and in the teams, where they hold, rather than designing them heavily up front and defending them at a review gate. On a fixed-price engagement that is the difference between an architecture the client adopts and one that lands with a thud after the engagement ends.

WHERE I FIT ON A BID

Architect on engagement	Own the architecture workstream on a fixed-price engagement and burn down an estimated block of hours, part time, alongside your delivery team.
Assessment and standards	Current-state review, target architecture, and the standards and decision rights that survive delivery. Includes unsticking programs churning between options with different stakeholder advocates.
Platform and integration	API, platform, and cloud architecture: payment rails, core banking modernization, developer platforms, identity and access.
Operating-model depth	When the finding is structural, decision rights, team topology, delivery cadence, I carry that workstream too. Larger operating-model mandates run through my practice, OpMo Advisory.

THE RECORD

Interac 2021 to 2026	Built the company's first formal enterprise architecture practice: standards, review forums, decision rights, and the strategy process behind them. Redesigned it when Interac moved to a product operating model, so architecture sat in the teams instead of at a checkpoint. Then led a 50-plus person Platform-as-Product organization, on the payment rails Canadians use more than 20 million times a day. AVP, Architecture and Strategy; Leader, Platform Delivery and Engineering.
CIBC 2019	Senior Director, Retail Banking and Shared Services Architecture, through a core API-native modernization push. Turned around a program stuck in stasis, churning on technical decisions between competing stakeholder options, by clarifying platform boundaries and decision rights and holding each owner accountable for unblocking their own platform.
TD 2016 to 2019	AVP, API Architecture. Set enterprise API strategy and governance for the bank: bank-wide standards and the practice built to run them. Prototyped an external developer platform years ahead of Canada's open banking mandate.
Earlier	Senior Security Strategist at Transmit Security (customer identity and authentication for Canadian FIs); API strategy consulting at CA Technologies; software engineering from 1999.

PRACTICALITIES

Availability

Part-time burn-down, up to 2 to 2.5 days per week alongside my practice. Available to start within two weeks. Remote-first with an on-site cadence to suit.

Engaged through

OpMo Advisory Inc. Incorporated and insured. Current rates and terms: opmoadvisory.com/firms/rates. Sector: Schedule I banks, payments infrastructure and networks, regulated fintech.

How to represent me. Senior architect with operating-model depth is the right frame: an architect who has also run the platform organizations that architecture serves. Please avoid staff-augmentation framing; the value on a bid is judgment and unblocking, not drafting capacity. Check with me before presenting to a client. I will turn a yes or no around same day.
