

GREG KLIEWER

Technology transformation executive · Founder and Principal, OpMo Advisory Inc.

Toronto, Ontario · greg@opmoadvisory.com · +1 (416) 434-8362 · linkedin.com/in/gregkliewer · opmoadvisory.com

Senior technology executive with over twenty years in Canadian financial services, the last decade accountable for enterprise-scale change at TD, CIBC, and Interac. My work is the socio-technical layer of transformation: decision rights, team topology, delivery cadence, and the platform foundations underneath them. I have been the accountable executive at a technology inflection point three times, through API-native architecture at TD and CIBC, the product operating model at Interac, and AI-native organizational design now.

I run an independent practice, OpMo Advisory Inc., and the first fit with a consulting firm is as a named sub on a client engagement, delivering under the firm's banner. The operating model framing is a market position, not the limit of the work. Underneath it is enterprise and solutions architecture in retail banking and payments, and I still work at that depth.

WHAT I AM BROUGHT IN TO DO

Operating model transformation

Project to product structures: squad design, value-stream alignment, decision rights, and the practice changes that make the model hold.

Platform as a product

Platform and cloud organizations run with internal customers, real discovery, and measurable adoption, not ticket queues.

AI-native delivery design

Team structures, decision cadences, and enablement architecture that turn AI spend into outcomes, including designs that budget agent capacity.

EXPERIENCE

OpMo Advisory Inc.

TORONTO · 2026 TO PRESENT

Founder and Principal

Independent practice in operating model alignment for organizations absorbing major technology change, focused on Canadian financial services. A structured diagnostic across eight operating-model dimensions, redesign of decision rights, team structures and delivery cadence, and fractional transformation leadership on retainer.

Interac Corp.

TORONTO · MAY 2021 TO APRIL 2026

Operator of the payment rails Canadians use more than 20 million times a day.

Leader, Platform Delivery and Engineering

NOV 2024 TO APR 2026

- Led a 50-plus person Platform-as-Product organization through a full transition from project delivery to a product operating model, spanning cloud, platform, and shared engineering services.
- Replaced a pooled DevOps model with cross-functional, empowered squads, and established a triad leadership model of Platform Manager for product accountability, Architect for system and experience integrity, and Tech Lead for technical execution.
- Held platform delivery commitments under a flat-headcount expectation by budgeting AI agent capacity into squad gaps rather than requesting headcount.
- Took newly formed squads through forming, storming, and norming using explicit metrics and an inspect-and-adapt cadence, with capability uplift as a named outcome rather than a side effect.
- Embedded AI through discovery and delivery as working practice: first-pass synthesis and validation in discovery, and AI-augmented engineering to close testing, security, and observability gaps.

Leader, CIAM (interim)

FEB 2025 TO JUN 2025

Held interim leadership of customer identity and access management through a leadership gap, concurrent with the platform delivery mandate.

Leader, Enterprise Architecture

JAN 2024 TO NOV 2024

Redesigned the architecture practice to serve empowered, squad-based product teams rather than gate them, moving architecture into the teams instead of holding it at a review checkpoint.

AVP, Architecture and Strategy

MAY 2021 TO JAN 2024

- Built the company's first formal enterprise architecture practice: standards, review forums, decision rights, and the technology strategy process behind them.
- Re-founded cloud platform services to operate as a product organization, treating internal engineering teams and business units as customers with real discovery and accountability.

GREG KIEWER

Transmit Security

GREATER TORONTO AREA · NOV 2019 TO MAY 2021

Senior Security Strategist

Advised Canadian financial institutions on customer identity, authentication strategy, and the architecture required to move away from password-based models.

CIBC

TORONTO · APR 2019 TO NOV 2019

Senior Director, Retail Banking and Shared Services Architecture

Owned architecture and strategy for retail banking and shared services through a core API-native modernization push, with accountability for standards and architectural direction across the portfolio.

- Orchestrated a turnaround for the program - which was stuck in stasis on arrival, churning on technical decisions between multiple options, each with different stakeholder advocates - by clarifying platform boundaries and decision rights, and holding each owner accountable for unblocking their own platform decisions and moving forward on a roadmap for change.

TD

TORONTO · MAY 2016 TO MAY 2019

AVP, API Architecture

Set enterprise API strategy and governance for the bank: bank-wide API standards, the governance model, and the practice built to run them.

- Prototyped an external developer platform years ahead of Canada's open banking mandate, one of the earliest of its kind among Canadian banks.

CA Technologies

CANADA · FEB 2012 TO MAY 2016

Senior API Strategist (2014 to 2016) · Senior Principal Consultant, Solutions Architect (2012 to 2016)

Advised enterprise clients, largely in financial services, on API strategy, business models, and integration architecture. Published and presented widely on the business case for APIs to both technical and non-technical audiences.

Earlier career in software engineering and solution architecture, from 1999.

EDUCATION

Georgian College, Diploma, 1997 to 1999 · University of Toronto, Victoria University, Hon. BA, 1993 to 1997

WORKING WITH A FIRM

Shapes	Named sub on a firm's client engagement: Transformation Lead · Operating Model Architect · Enterprise or Platform Architect. Also open to interim line seats (VP, Technology Transformation · Head of Platform Engineering · Head of Enterprise Architecture) where the client mandate calls for one.
Sector	Financial services: Schedule I banks, payments infrastructure and networks, scale-stage regulated fintech. Adjacent: identity, regtech, digital trust.
Delivery	Under the firm's banner or in my own name, embedded with the firm's team or leading a client workstream. Comfortable building the operating model and training the leader who inherits it.
Practicalities	Engaged through OpMo Advisory Inc., incorporated and insured. Remote-first with an on-site cadence to suit. Available to start within two weeks. Current rates and terms: opmoadvisory.com/firms/rates
