

GREG KIEWER

Fractional Platform & AI-Transformation Executive

2 to 2.5 days per week · interim or fractional · remote-first with an on-site cadence to suit

Senior operating leadership for platform and AI transformation. Not always instead of the full-time hire, sometimes alongside it, building and teaching the operating model that hire needs to run.

I have led this as the accountable executive through three technology waves in Canadian financial services: API-native architecture at TD and CIBC, the product operating model at Interac, and AI-native organizational design now. One engagement at a time.

THE SEAT, AND WHAT IT COSTS

Seat	Commitment and fee	What it includes
B Embedded Lead Most common	2 days per week \$21,000 / month	A standing seat in your governance forum, embedded with the leadership team, owning a named workstream.
C Transformation Lead	2.5 days per week \$26,000 / month	The embedded seat plus accountability for the operating-model outcome, and for training the person who inherits it.
A Advisory Seat	1 day per week \$10,500 / month	A seat at the governance table and judgment on call, without workstream ownership. For a board or exec team that needs counsel, not delivery.

Three-month initial term, then month to month on thirty days' notice. The commitment is capped in days per month and written into the agreement. No timesheets: you are buying a standing seat and availability between the forums, not metered hours. Engaged through OpMo Advisory Inc., available to start within two weeks.

WHAT THE SEAT COVERS

Interim VP, Platform

Platform Engineering

Own a platform organization through a transition, whether a leadership gap, a reorg, or a modernization push, and leave it running as a product.

Transformation Lead

Product & Platform Operating Model

Move delivery from project to product structures: squad design, value-stream alignment, decision rights, and the practice changes that make the model hold. Training the operators who inherit it is part of the mandate.

Transformation Lead

AI-Native Operating Model

Stand up the team structures, decision cadences, and enablement architecture that turn enterprise AI spend into outcomes, including designs that budget agent capacity.

THE FIT TEST

This works when a specific structural job needs senior judgment now: a platform org between leaders, a product-model transformation that has stalled, or an AI mandate with no owner for the operating-model layer. Whether you already have the operator or still need to hire one, the operating model is what they inherit.

If your problem is judgment applied surgically to organizational and ways-of-working transformation, building the operating model and training whoever inherits it, then we should talk.

I hold one fractional seat at a time. The 2.5-day ceiling is what guarantees the seat stays senior and the practice behind it stays current.

THE RECORD

Interac 2021 to 2026

Built the company's first formal enterprise-architecture practice, then led a 50-plus person Platform-as-Product organization to a product operating model.

*AVP Architecture & Strategy;
Leader, Platform Delivery & Engineering*

TD and CIBC 2016 to 2019

Set enterprise API strategy and governance through the API-native wave: bank-wide standards, an early external developer platform, core modernization.

*AVP, API Architecture (TD);
Senior Director, Architecture (CIBC)*

OpMo Advisory now

Operating-model and AI-transformation practice for Canadian financial services. The seat and the practice reinforce each other, so clients get current thinking.
