

OPERATING MODEL DIAGNOSTIC

OpMo Advisory · Operating Model Alignment

Four to six weeks · fixed scope · one flat fee · credited in full against the work that follows

"We have funded this and we are not getting it. And we cannot tell you whether the problem is the plan, the people, or the structure."

That sentence sits behind most stalled transformations. The investment cleared approval and the milestones were hit. The outcome in the business case did not arrive, and nobody can cleanly separate the three possible causes.

This diagnostic separates them. In four to six weeks: a scored assessment of the structures that decide whether change compounds or fragments, a roadmap sequenced by dependency rather than by ease, and a readout you can put in front of your own board without translating it first.

WHEN IT APPLIES

AI adoption at scale · Product model transition · Large-scale cloud adoption · Cloud divestment or repatriation · Portfolio or platform consolidation · Merger or acquisition integration · Regulatory or mandate-driven change · Post-reorg or leadership change

Different triggers, one underlying failure: the structures that carry change were never re-cut when the mandate changed. Sharpest when an investment has landed and the results have not, or a named deadline is approaching and delivery confidence is falling.

THE EIGHT DIMENSIONS ASSESSED

Decision rights. Who decides, at what threshold, and how fast a decision actually clears.

Team structure and topology. How teams are cut relative to the value they own.

Capacity model. Whether new capability has resourcing behind it or is expected to be absorbed.

Discovery and review cadence. How often assumptions get tested against reality, and by whom.

Accountability and ownership. Whether ownership is nominal or carries real authority.

Metric definition. Whether the organization measures value created or work shipped.

Governance architecture. How oversight is exercised without becoming the bottleneck.

Platform foundations. Whether shared capability is run as a product with internal customers.

WHAT YOU RECEIVE

1. A scored assessment across all eight dimensions.
2. A prioritized intervention roadmap, sequenced by dependency rather than by ease.

3. An explicit cost-of-inaction framing for the top three gaps.
4. An executive readout, built to present to your leadership without translation.

SCOPE, FEE AND TERMS

Duration	Four to six weeks. Fixed scope, fixed deliverable set, fixed end date.
Fee	[FEE-P1], flat and fixed. The same fee whether the assessment runs three weeks or six. Scope is set by organizational boundary, agreed before signature, not by hours worked.
Payment	Fifty percent on signature, fifty percent on delivery of the readout.
Credited forward	One hundred percent of the fee is credited against the engagement that follows, if commissioned within sixty days of the readout. The diagnostic is phase one of the larger work, and it is priced that way.
What is fixed	A fixed deliverable list, [N] stakeholder interviews, [R] readout sessions. Additional business units or readouts are quoted as a separate fixed fee before work starts.

The diagnostic stands alone. A scored answer, a sequence, and a document your leadership can act on whether or not you engage anyone to do the work. Where it points to further work, the fee you have already paid comes off the top.
